Adnan Madi

Software Engineer

Kuala Lumpur, Malaysia | adnanmadi417@gmail.com | +60 11-7006 4361 | LinkedIn | GitHub | Portfolio

Professional Summary

Software Engineer with full-stack experience building production web applications with React/Next.js, Vue.js/Nuxt.js and Python/Django. Comfortable owning a feature or project end to end, from UI and design systems through REST API design and backend architecture to cloud deployment. Brings product-management experience owning requirements, roadmap and delivery for a bilingual, multi-role NGO platform.

Technical Skills & Languages

- **Frontend:** JavaScript, TypeScript, React, Next.js, Vue.js, Nuxt.js, Tailwind CSS, HTML5, CSS3/SASS, Bootstrap, Axios, i18next (RTL/bilingual UI), Responsive Design, UI/UX Principles
- **Backend:** Python, Django, Django REST Framework, REST API Design, PostgreSQL
- **Infrastructure & Tools:** Git, DigitalOcean (App Platform, Spaces), Vercel, Neon, Postman, WordPress, Figma
- **Testing & Automation:** Playwright (end-to-end testing), System Automation
- **Product:** Requirements gathering, Roadmapping, Agile/Scrum
- **Languages:** English, Arabic

Working Experience

Front End Developer | Unibexs *Sep 2025 – Present*

- Develop scalable, performance-optimized frontend applications.
- Collaborate with cross-functional teams to implement design systems and improve user experience.
- Integrate frontend interfaces with backend services for reliable system functionality.

Product Manager & Frontend Developer | Palestinian Forum Malaysia (PFM) *May 2026 – Present*

Bilingual (English/Arabic) aid-management platform connecting Palestinian beneficiaries in Malaysia with assistance projects. React, Tailwind CSS, REST APIs (Django).

Product ownership

- Owned the product from requirements to release, translating the NGO's aid-delivery process into features, priorities and release plans across 20+ modules (projects, beneficiaries, applications, events, opportunities, news, staff).
- Designed the end-to-end assistance-application workflow (draft, document upload, submission, staff review) with eligibility rules based on beneficiary classification and per-project document requirements.
- Defined role-based access for public users, beneficiaries, staff and admins, including staff-assignment rules and who can view funding and milestone progress.
- Aligned API contracts and validation rules with the backend team so errors are caught in the form, not by the server.

Frontend engineering

- Architected the React frontend as domain-based feature modules with five role-based layouts and 100+ routes.
- Delivered full bilingual English/Arabic support with right-to-left layout using i18next.
- Implemented secure file handling: presigned uploads direct to DigitalOcean Spaces (keeping files off the application server), URL safety checks and automatic token refresh.
- Built admin dashboards (ApexCharts) and project tracking for funding progress, milestones, beneficiaries helped, updates and galleries.
- Built a guided self-service application flow that requests only missing profile details and documents, reducing incomplete submissions.

Front End Developer | Code & Canvas *Sep 2025 – Mar 2026*

- Developed high-performance, scalable front-end applications with a focus on user experience.
- Implemented design systems, optimized responsiveness and integrated interfaces with backend services.

Relevant Projects

Full-Stack Developer | Recycling Hub – Waste Management Platform & Website

Django REST Framework, Next.js, TypeScript, PostgreSQL (Neon), DigitalOcean, Vercel, Playwright.

- Built the full-stack system end to end: a public website plus an internal admin and staff system covering pickup requests, material categories, content management, partnerships, staff and user management, file storage and role-based dashboards.
- Designed the data model and role-based workflows for five roles (Admin, Staff, Driver, Receiving Officer, Accounting), translating operational requirements into backend APIs and frontend features.
- Built reusable UI and form component libraries and backend API conventions, keeping delivery consistent across 10+ feature modules.
- Set up a Playwright end-to-end test suite as a standing regression gate, with a test for every shipped feature.
- Deployed the Django backend on DigitalOcean App Platform with Spaces object storage and Neon managed PostgreSQL, and the frontend on Vercel.

Education

University of Malaya | Master of Software Engineering *2026 – Present*

Albukhary International University | Bachelor of Computer Science (Honours) *2022 – 2025*
